READ ME LONDON

The collected data are in three files:
1) LONDON: with the registration of all cycles of length up to 100 days
2) ANOMALI: with the registration of the cycles of each woman for whom has been observed a length of more than 100 days (with an instance of a cycle with maximum length of 286 days)
3) ALLETAEV contains the information of the file LONDON (but without records of daily basal temperature) and also some information about the history of the woman, specifically: date of marriage, date of last event, number of children, and age (in complete years as a difference between date of birth and initial date of her first cycle at entry into the study).

Analytical list of included files:
- VARLONDON.pdf: description of the record of file LONDON
- VARALLETAEV.pdf: description of the record of file ALLETAEV
- LONDON.dbf: with the data of LONDON in dbase format
- LONDON.txt: with the data in text format
- LONDON.ssd: with the data in SAS format
- ANOMALI.dbf: with the records of anomalous cycles in dbase format
- ANOMALI.ssd: with the records of anomalous cycles in SAS format
- ALLETAEV.dbf: with the data of the file ALLETAEV in dbase format
- ALLETAEV.txt: with the data of the file ALLETAEV in text format
- ALLETAEV.ssd: with the data of ALLETEV in SAS format
